

“Smart Building” pilot Capacity Building workshop

Organized in the framework of the ESMARTCITY project, funded by the Interreg Med Program

July 12, 2019 in Lyon (France)

The ESMARTCITY project aims to improve the innovation capacity of MED actors of the Smart City Concept in urban areas. To achieve this goal, pilot deployments on smart and energy efficient buildings are deployed in order to help creating the missing public authority / end user pull for Smart City concept. The global objective is to allow better services for European citizens with less impact on the environment and policy change recommendations to Public Authorities in the MED area.

INSA Lyon invites you to the 1st capacity building workshop of the ESMARTCITY project to share learnt lessons and acquired knowledge on “smart building” pilots. This event aims at identifying solutions to overcome potential constraints and hurdles of the smart city concept.

Come and share your experience, and know-how!
